Description

The user is unable to renew his/her book on Library Management Software which is issued already. After adding more than one book to the issue category (which is already issued to the user), the application is getting crashed again and again.

Steps to Reproduce:

1. Open the login interface of the LMS (Library Management Software).
2. login into the web with a valid user id and password.
3. Search for the Issued book
4. Try to renew the book
5. Observe that the renewal process fails with an error message
6. Add 2 or more books to the Issue Book category
7. Observe that the application is working properly or crashed

Expected Results:

1. The user should be able to renew the book without any issues.
2. The application should allow adding more than 2 books in the Issue Book category without issues.

Actual Results:

1. The renewal process fails with an error message.
2. The application crashes after adding more than 2 books in the Issue Book category.
